

Dazzle 1.5

What is Dazzle?

Dazzle is a free "check for updates" framework for dashboard widgets, allowing you to easily notify users when an update is available. Dazzle is flexible, but is easy to include in your widget. It was inspired by the [Sparkle](#) framework for Cocoa applications.

How do I add Dazzle to my widget?

There are instructions on how to add Dazzle to your widget on the [Dazzle main page](#).

How do I learn more about Dazzle?

If you want to see all the things you can do with Dazzle (and how to do them), have a look at the [Dazzle Guide](#). If you want to look up something, or just like browsing through references, have a look at the [Dazzle Reference](#).

If you want to have a look at a working demo, have a look at the "DazzleDemo" widget included with the Dazzle download.

I like Dazzle. How can I help future development?

As you can probably imagine, writing Dazzle has taken quite a bit of my time and energy (as most coding does!). If you want to support Dazzle, please consider making a donation by clicking on the "Donate" button in the header of the [Dazzle website](#)...
